**CITATION:** Christ, M. and Moore, S. 2016. Toxicity of Transfluthrin Technical During a Dietary LC<sub>50</sub> with the Northern Bobwhite Quail (*Colinus virginianus*). Unpublished study performed by SynTech Research Laboratory, Stilwell, Kansas, USA. Laboratory Study No. 007SRUS15C122. Study sponsored by Bayer CropScience, Research Triangle Park, North Carolina, USA. Study initiated October 30, 2015 and completed February 9, 2016.

**DISCLAIMER:** This document provides guidance for EPA and PMRA reviewers on how to complete a data evaluation record after reviewing a scientific study concerning the acute dietary toxicity of a pesticide to avian species. It is not intended to prescribe conditions to any external party for conducting this study nor to establish absolute criteria regarding the assessment of whether the study is scientifically sound and whether the study satisfies any applicable data requirements. Reviewers are expected to review and to determine for each study, on a case-by-case basis, whether it is scientifically sound and provides sufficient information to satisfy applicable data requirements. Studies that fail to meet any of the conditions may be accepted, if appropriate; similarly, studies that

# Data Evaluation Report on the Acute Dietary Toxicity of Transfluthrin Technical to Bobwhite Quail (*Colinus virginianus*)

PMRA Submission Number {.....}

EPA MRID Number 49617840

meet all of the conditions may be rejected, if appropriate. In sum, the reviewer is to take into account the totality of factors related to the test methodology and results in determining the acceptability of the study. This Data Evaluation Record may have been altered by the Environmental Fate and Effects Division subsequent to signing by CDM/CSS-Dynamac JV personnel.

## EXECUTIVE SUMMARY:

The acute dietary toxicity of Transfluthrin technical to 10 day-old Northern Bobwhite Quail (*Colinus virginianus*) was assessed over 8 days. Transfluthrin was administered to the birds in the diet at nominal concentrations of 0 (control), 313, 625, 1250, 2500, and 5000 mg ai/kg diet. Mean-measured concentrations were <20 (<LOQ, control), 307, 620, 1245, 2513, and 4905 mg ai/kg diet, respectively. No mortalities or clinical signs of toxicity were observed in the control or treatment groups. Mean body weights in 1245 and 4905 mg ai/kg diet groups were lower than the control on Days 5 and 8, and appeared to be treatment related. Similarly, reductions in body weight gains were observed in the 1245 and 4905 mg ai/kg diet groups compared to the control. Reductions in food consumption were observed in 4905 mg ai/kg diet group compared to the control. The 8-day acute dietary LC<sub>50</sub> was estimated as >4905 mg ai/kg diet.

According to the US EPA classification, Transfluthrin technical would be classified as **practically nontoxic** to quail on an acute dietary basis.

This study is scientifically sound and is classified as acceptable.

## **Results Synopsis**

Test Organism Size/Age (Weight range): 10 days old; 24.5 to 31.9 g

|  |               |
|--|---------------|
| LC <sub>50</sub> : >4905 mg ai/kg diet | 95% C.I.: N/A |
| Slope: N/A                             | 95% C.I.: N/A |

Endpoint(s) affected: None

Most sensitive endpoints: None

## **I. MATERIALS AND METHODS**

**GUIDELINE FOLLOWED:** The study was based on procedures outlined in U.S. EPA OCSPP Guideline 850.2200 and OECD Guideline 205. No deviations from U.S. EPA OCSPP Guideline 850.2200 were observed.

**COMPLIANCE:** Signed and dated GLP, Quality Assurance, and Data Confidentiality statements were provided. This study was conducted in accordance with the U.S. EPA GLP Standards (40 CFR 160) with the exceptions of the data collected for bird feed and corn oil screening analyses and the data collected for public water analysis.

### **A. MATERIALS:**

**1. Test Material:** Transfluthrin technical

**Description:** White solid

# Data Evaluation Report on the Acute Dietary Toxicity of Transfluthrin Technical to Bobwhite Quail (*Colinus virginianus*)

PMRA Submission Number {.....}

EPA MRID Number 49617840

**Lot No./Batch No.:** AE0035474-01-07

**Purity:** 97.7%

## Stability of Compound Under Test Conditions:

The compound was stable under test conditions. The measured test concentrations on Day 5 were 92-100% of Day 0 samples for all treatment groups (reviewer-calculated). The mean measured concentrations were 98-101% of nominal.

## Storage Conditions of Test Chemicals:

Ambient.

## Physicochemical properties of Transfluthrin technical.

| Parameter                | Values       | Comments |
|--------------------------|--------------|----------|
| Water solubility at 20°C | Not reported |          |
| Vapor pressure           | Not reported |          |
| UV absorption            | Not reported |          |
| pKa                      | Not reported |          |
| Kow                      | Not reported |          |

(OECD recommends water solubility, stability in water and light, pKa, Pow, and vapor pressure of test compound)

## 2. Test organism:

**Species:** Northern Bobwhite Quail (*Colinus virginianus*)  
**Age at study initiation:** 10 days old  
**Weight at study initiation (range):** 24.5 to 31.9 g (Day 0 weights)  
**Source:** Quail Ranch, Wardville, Oklahoma, USA

## B. STUDY DESIGN:

### 1. Experimental Conditions

a. Range-finding study: No range-finding study was reported.

b. Definitive study:

**Table 1: Experimental Parameters**

| Parameter                         | Details      | Remarks  |

| Parameters                                     | Details  | Remarks |
|--|--|---------|
|  | For homogeneity, the measured 313 and 5000 ppm diet samples were 100-101% of nominal (RSD=2.48 to 3.16%).  |         |
| Indicate if the test material was regurgitated | No regurgitation was reported.   |         |
| Treatments on which necropsies were performed  | Necropsies were performed on all surviving birds.  |         |
| Observation intervals:                         | <p>Birds were observed for mortality and clinical signs of toxicity three times on Day 0 (1, 2, and 3 hours after diet administration), twice daily on weekdays up to Day 7, and once on Day 8.</p> <p>Individual body weights were measured on Days 0, 5, and 8. Body weight change was determined for Days 0-5, Days 5-8, and Days 0-8.</p> <p>Food consumption was determined daily from Days 1 to 8, and overall for Days 0-5, Days 5-8, and Days 0-8.</p> |         |
| Were raw data included?                        | Yes  |         |

**II. RESULTS AND DISCUSSION:**

**A. MORTALITY:**

No mortalities were observed in the control or treatment groups. The acute dietary LC<sub>50</sub> was estimated as >4905 mg ai/kg diet.

a Data obtained from Table 2 on page 21 of study report.

## B. SUB-LETHAL TOXICITY ENDPOINTS:

No clinical signs of toxicity were observed in the control or treatment groups during the study.

During the exposure period (Days 0-5), significant reductions in body weight gains were observed in the  $\geq 1245$  mg ai/kg diet groups compared to the control. During the post-exposure period (Days 5-8), significant reductions in body weight gains were observed in the 4905 mg ai/kg diet groups compared to the control. Overall (Days 0-8), significant reductions in body weight gains were observed in the 1245 and 4905 mg ai/kg diet groups compared to the control. Mean body weights in 1245 and 4905 mg ai/kg diet groups were significantly lower than the control on Days 5 and 8.

Significant reductions in food consumption were observed in the 4905 mg/kg group compared to the control during the exposure period (Days 1-5), post-exposure period (Days 5-8), and overall (Days 0-8). Mean daily dietary doses were 52, 100, 191, 403, and 673 mg ai/kg bw/day in the mean-measured 307, 620, 1245, 2513, and 4905 mg ai/kg diet levels, respectively.

a Data obtained from Tables on pages 16-18 of study report.

\* Statistically significant difference compared to the control (Dunnett's test for body weight, empirically estimated for food consumption).

\*\* Statistically significant difference compared to the control (Steele's One-Rank test for body weight).

NA=Not applicable

# Data Evaluation Report on the Acute Dietary Toxicity of Transfluthrin Technical to Bobwhite Quail (*Colinus virginianus*)

PMRA Submission Number {.....}

EPA MRID Number 49617840

## C. REPORTED STATISTICS:

The LC<sub>50</sub> (median lethal concentration) was not calculated because no treatment related mortalities were observed. The means and standard deviations for body weights and feed consumption data were calculated in Microsoft® Excel. Due to the fact that there were no replicates for feed consumption, comparisons were limited to empirical analyses. Body weight and growth data were subjected to statistical analysis including normality using the Chi-square test ( $\alpha = 0.01$ ) and homogeneity of variance using the Levene's test ( $\alpha = 0.05$ ). Parametric procedures involved subjecting body weight data to a standard one-way analysis of variance (ANOVA) followed by a means comparison using a one-tailed Dunnett's test ( $\alpha = 0.05$ ), where the means of the treatment groups were compared to control means. The statistical analyses on body weight were conducted using TOXSTAT software (version 3.4), and the results are reported as mean-measured concentrations.

## D. VERIFICATION OF STATISTICAL RESULTS:

Statistical Method: The reviewer entered the mortality, body weight change, and regurgitation data into the database/program CETIS version 1.8.7.12, with backend settings implemented by EFED on 10/20/15. The mean-measured test concentrations were used. The LD<sub>50</sub> was empirically determined by the reviewer due to a complete lack of mortality in this study.

### Statistical Method:

|  |               |
|--|---------------|
| LC <sub>50</sub> : >4905 mg ai/kg diet | 95% C.I.: N/A |
| Probit Slope: N/A                      | 95% C.I.: N/A |

## E. STUDY DEFICIENCIES:

No deviations or deficiencies from the OCSPP 850.2200 guidelines were noted.

## F. REVIEWER'S COMMENTS:

The reviewer's results generally agree with the study author's. Both the study author and the reviewer estimated the LD<sub>50</sub> to be >4905 mg ai/kg diet based on a lack of mortality.

The in-life phase of the definitive study was conducted November 5-13, 2015.

## G. CONCLUSIONS:

This study is scientifically sound and is classified as acceptable. No mortalities or clinical signs of toxicity were observed in the control or treatment groups. Mean body weights in 1245 and 4905 mg ai/kg diet groups were lower than the control on Days 5 and 8, and appeared to be treatment-related. Similarly, reductions in body weight gains were observed in the 1245 and 4905 mg ai/kg diet groups compared to the control. The LC<sub>50</sub>, based on a lack of mortality, was >4905 mg ai/kg diet.

|  |               |
|--|---------------|
| LC <sub>50</sub> : >4905 mg ai/kg diet | 95% C.I.: N/A |
| Slope: N/A                             | 95% C.I.: N/A |

Endpoint(s) affected: None

Most sensitive endpoints: None
